

MIKE WENDLAND'S TECHCAST: First look at Apple's new Leopard operating system

Contributed by
Friday, 26 October 2007

The Leopard is loose. This is the weekend Apple has released Leopard, the latest and biggest upgrade yet to its OS X operating system -- the software that is to Apple computers is what Windows Vista is to PCs. Packed with more than 300 new features, Leopard is the most sophisticated such system to ever run a personal computer. Watch Mike as he installs and checks it out in a couple of videos.
